Frequently Asked Questions

What is Dubble and how does it work?

Dubble is an AI-driven documentation tool that automates the creation of step-by-step guides, videos, and screenshots. It works by recording the actions a user performs on their computer, interpreting these actions, and turning them into comprehensive documentation. The user can then edit these recordings to create more precise and relevant guides and instructions, which can be shared with team members or uploaded to various platforms that support rich content or markdown.

How does Dubble help in creating step-by-step guides?

Dubble observes and records the tasks performed by a user, translates these activities into detailed instructions and supporting visuals. This translation is instant and automated, eliminating the need for manual documentation. The user can also edit the translations as needed for clarity and relevance.

Can Dubble record videos and take screenshots?

Yes, Dubble can record videos of user activities and capture screenshots as part of the documentation process. These recordings and images are then used in creating step-by-step guides, enhancing comprehension and usefulness.

How can Dubble be beneficial for support teams?

Dubble provides support teams with a user-friendly way to create, edit, and maintain relevant and accurate instructions and procedures.
