- Longer intervals on basic plan
- Short data retention (basic plan)
- More expensive for instant alerts
- No sentiment analysis for basic
- Limited seats (basic & startup)
- Lacks transparency on accuracy

ADDITIONAL LIMITATIONS

- △ Limited platforms monitored
- △ No free trial
- △ Limitations on keywords
- △ Mentions limit

Frequently Asked Questions

What is Crowd़lens?

Crowd़lens is an artificial intelligence (AI)-powered tool that is designed to monitor the web and social platforms relevant to B2B software companies. Its purpose is to provide comprehensive coverage of multiple platforms like LinkedIn, Reddit, and GitHub to help businesses stay alert to mentions about their brand, their competitors, or any important keywords.

How does Crowd़lens utilize AI to monitor the web and social media platforms?

Crowd़lens utilizes AI to monitor the web and social media platforms by using advanced pattern recognition and data analysis algorithms. This technology enables it to track brand mentions, monitor competitor activities, and spot keyword usage in real-time across multiple platforms. It also uses AI to offer features such as relevance scoring and sentiment analysis, helping users understand the context and significance of the mentions detected.

What does 'relevance scoring' mean in the context of Crowd़lens' features?

Relevance scoring is a feature offered by Crowd़lens that utilises AI to assess and score the relevance of brand or keyword mentions by analyzing various factors such as the content of the mention, its source, and the context around it. This score helps users to filter and focus on the most important mentions that are likely to have a significant impact on their brand or business.

How does Crowd़lens perform sentiment analysis for mentions about my brand?

Crowd़lens performs sentiment analysis by using AI to assess the emotional tone or attitude conveyed in the mentions. This technology analyses the textual content within the mentions and assigns positive, negative, or neutral tags based on the language, context, and tone used. This helps businesses understand public sentiment about their brand, product, or service.

What platforms does Crowd़lens monitor mentions on?

Crowd़lens monitors mentions on multiple platforms relevant to B2B software companies, including Twitter/X, LinkedIn, Reddit, GitHub, YouTube, Stack Overflow, Product Hunt, Hacker News, and DEV.to.

How can Crowd़lens help with competitor analysis?

Crowd़lens assists with competitor analysis by tracking all mentions related to your competitors across multiple platforms. This enables businesses to stay updated on what is being said about their competitors, their strategies, products or services, and use these insights for improving their own strategies.

What kind of alerts does Crowd़lens provide and how do they work?

Crowd़lens provides real-time alerts that are triggered when there is a mention of the brand, competitors, or relevant keywords across any of the tracked platforms. These alerts are sent either via email or Slack depending on the user's preference, enabling timely responses.

Why is Crowd़lens beneficial for founders, marketers, and sales reps?

Crowd़lens is beneficial for founders, marketers, and sales reps as it enhances their ability to monitor their brand, track competitors, and detect useful trends in real-time across various online communities. This information aids in understanding public sentiment, identifying potential opportunities, and interacting promptly with the online community.

Is there a limitation to the number of mentions Crowd़lens can track?

Yes, there is a limitation to the number of mentions Crowd़lens can track which depends on the specific subscription plan. For instance, the 'Individual' plan covers 500 mentions, while the 'Startup' plan covers up to 1,000 mentions.

Can Crowd़lens also monitor mentions about specific keywords related to my business?

Yes, Crowd़lens enables monitoring mentions regarding specific keywords related to your business. This is done by tracking these keywords across all the platforms it covers, which means any time your chosen keywords come up in a discussion, you'll receive an alert.

How can I share reports generated by Crowd़lens within my team?

Crowd़lens offers shareable reports that help in understanding and sharing trends. These reports compile all the mention data and can be effortlessly shared among your team members for strategic discussions or analyses.

How can I consume mention data programmatically using Crowd़lens?

Crowd़lens provides API access allowing your development team to consume mention data programmatically. This means you can integrate the mention data fetched by Crowd़lens with other systems or applications for a streamlined flow of information.

Is it possible to customize the tracking settings in Crowd़lens based on my brand's needs?

Yes, Crowd़lens offers customization options to track settings based on your brand's needs. This flexibility allows businesses to monitor chosen keywords, select specific platforms for monitoring, configure the alert frequency, among others.

How quickly does Crowd़lens send alerts after detecting a mention?

Crowd़lens is designed to send real-time alerts, which means you get notified in seconds whenever it detects a mention.

Can Crowd़lens help me understand the context and significance of the mentions detected?

Yes, through AI capabilities like relevance scoring and sentiment analysis, Crowd़lens can provide insights into the context and significance of the mentions. Relevance scoring helps to understand the importance of a mention, while sentiment analysis provides understanding about the emotional tone of the mention.

What type of data does Crowd़lens provide in the reports?

The reports generated by Crowd़lens offer comprehensive data about the mentions including the content of the mention, source platform, sentiment rating, relevance score, and other associated metadata. These reports present evaluated trends and enable users to make informed marketing decisions.

How does Crowd़lens identify relevant conversations on social media?

Crowd़lens uses AI to identify relevant conversations on social media. It does this by tracking all discussions including your brand, product, or chosen keywords across different platforms. The considered factors include content relevance, the source's influence, engagement rates, and the use of specific keywords.

Do I need any prior technical knowledge to use Crowd़lens?

No, you do not need any prior technical knowledge to use Crowd़lens. It is designed to be a user-friendly tool with an intuitive interface that enables easy setup, monitoring, and reporting without needing any technical expertise.

How does Crowd़lens differentiate between positive and negative mentions about my brand?

Crowd़lens differentiates between positive and negative mentions about your brand using its sentiment analysis feature. This feature analyzes the language, context, and tone in the mention, giving it a sentiment score, which can be positive, negative or neutral.

How can Crowd़lens assist me in engaging quickly with my online community?

Crowd़lens assists in quick engagement with your online community by sending real-time alerts whenever a brand mention occurs. This feature gives businesses the opportunity to respond promptly to any discussions or interactions involving their brand or relevant topics on social media or other online platforms.
