What It Does

Realistic random data for Figma projects. Mockcreate AI is a Figma Community plugin that generates random data for selected text. It offers a variety of features and datasets, including first names (with sorting options for male, female, or both), last names, full names (combining first and last names), usernames, emails, phone numbers. Key strengths include generates random data, generates first names, generates last names. If you need a AI solution with clear outcomes, Mockcreate is worth evaluating in your shortlist. This listing is relevant for searches like "best ai ai tool for data" and "mockcreate alternative for mockup".

Best For: Best for teams looking for ai workflows with practical outcomes and measurable productivity gains.

KEY FEATURES

- Generates random data
- Generates first names
- Generates last names
- Gender-sorting for names
- Generates full names

CONTENT QUALITY

82/100

USEFULNESS SCORE

88/100

Pros

+ What Works Well

- + Generates random data
- + Generates first names
- + Generates last names
- + Gender-sorting for names
- + Generates full names
- + Generates usernames
- + Generates emails
- + Generates phone numbers
- + Customizable phone number prefixes
- + Customizable phone number lengths
- + Generates dates
- + Customizable year for dates
- + Customizable date formatting
- + Generates times
- + Customizable time formatting
- + Generates number ranges
- + Customizable range for numbers
- + Generates money amounts
- + Customizable range for amounts
- + Customizable currency position
- + Generates credit card numbers
- + Generates Ethereum addresses
- + Ability to import custom datasets
- + Replaces selected layers with data
- + Built-in text layer creation
- + Dark mode option
- + Part of the Figma Community
- + Over 2.1k users
- + No need for external websites

Cons

- Limitations to Consider

- Figma platform exclusive
- No mobile compatibility
- No multi-language support
- No built-in data validation
- No API for automation
- Limited options for customization
- Dependent on Figma updates
- Developer support uncertainty
- No mention of data security
- Only single user functionality

ADDITIONAL LIMITATIONS

- △ Figma platform exclusive
- △ No mobile compatibility
- △ No multi-language support
- △ No built-in data validation

Frequently Asked Questions

What exactly is Mockreate AI?

Mockreate AI is a plugin for Figma that generates random mock data for selected text. It provides a range of features and datasets allowing users to generate different types of mock data such as names, usernames, emails, phone numbers, dates, times, number ranges, money amounts, credit card numbers, Ethereum public addresses, and custom datasets imported via URL.

How does Mockreate AI generate mock data?

Mockreate AI generates mock data based on the user's specifications. Users can specify the type and format of the data they want to generate. For instance, they can generate first names and sort them between male, female, or both genders. Additionally, other features like phone numbers allow users to customize their prefix and length, and the date and time can also be customized according to the user's preferred format.

Can I use Mockreate AI to generate both male and female first names?

Yes, Mockreate AI allows users to generate both male and female first names. There is an option for users to sort between male, female, or both.

Is it possible to generate users' email details using Mockreate AI?

Absolutely. Users can generate mock email details using Mockreate AI. The tool provides a dataset specifically for generating email addresses.

How does the phone number generation feature of Mockreate AI work?

The phone number generation feature of Mockreate AI works by letting users select a phone prefix and a length. In addition, recent updates allow you to pick a number format from a list of a few countries or create a custom pattern to follow.

Can I customise the date and time formatting options in Mockreate AI?

Yes, Mockreate AI allows users to customize the date and time format according to their preferences. Users can choose the year and the formatting options for generating date and time data.

How does Mockreate AI generate number ranges?

Mockreate AI generates number ranges by allowing the user to pick two numbers. The program will then generate random numbers that fall within the chosen range.

Will Mockreate AI allow me to generate money amounts in different currencies?

Yes, Mockreate AI enables you to generate random money amounts within a given range, giving you the option to select the position of the currency symbol.

Does Mockreate AI also generate credit card numbers and Ethereum public addresses?

Indeed, alongside its many other features, Mockreate AI has the capacity to generate credit card numbers and Ethereum public addresses.

Can I import custom datasets in Mockreate AI? If so, how?

Yes, Mockreate AI supports the import of custom datasets. This can be achieved by providing a URL of the JSON format data that you wish to import.

How does replacing selected layers with generated mock data work in Mockreate AI?

Replacing selected layers with generated mock data in Mockreate AI is done by selecting the layers you want the mock data to replace. Once the layers are selected, the type of data can be chosen and Mockreate AI will generate it and replace the selected layers accordingly.

Do I need to create text layers first before using them in Mockreate AI?

Not necessarily. Users can create text layers directly using Mockcreate AI. This eliminates the need to create the layers first and then replace them, which enhances the working efficiency within Figma.

What is the use of the Figma Community in relation to Mockcreate AI?

The Figma Community is a space for Figma users to share their creations. Mockcreate AI, as a product of this community, can be shared and used by other Figma users.

What is the purpose of Mockcreate AI's dark mode option?

The dark mode option in Mockcreate AI serves to enhance visibility. It's a visual customization to provide a comfortable user interface, particularly under low-light conditions.

How popular is Mockcreate AI among users?

Mockcreate AI is quite popular among users. As noted on their website, it has been embraced by over 2.1k users in the Figma Community.

How does Mockcreate AI integrate with Figma?

Mockcreate AI integrates with Figma by allowing users to generate and replace selected layers with mock data directly within the Figma environment. Users don't need to switch to any other software or tool to generate the mock data. All functionality is available within Figma once the plugin is installed.

Is Mockcreate AI free for use under the Figma Community Free Resource License?

Yes, Mockcreate AI is free for use under the Figma Community Free Resource License. This is a plugin licensed under the conditions outlined by this license.

Who developed Mockcreate AI and how can I get in touch for support?

Mockcreate AI was developed by Fabio Monzani. For support, users can get in touch via the provided email address: ."
